

Revolutionary Assets, Inventory and Record Management with RFID

Nox: Find it anytime, anywhere.

ASSETS, INVENTORY AND RECORD MANAGEMENT WITH RFID

Track Everything: Nox monitors RFID tags and vigilantly watches them. If tags enter a no-go area, an alarm is set off. See who did what, when in real-time or historically. Nox ties the RFID information with video to go way beyond asset tracking -- into asset surveillance.

NoxVault™ lets you take an inventory of about 100 items in a second

NoxCORE™ takes it further and integrates all your items with video for a next-generation asset surveillance system.

- If it moves, NoxCORE tracks it
- Integrate RFID with Video to automatically catalog item ID's to Video events
- Covert / Clandestine Surveillance

RFID solution advantages:

- 100% Asset Tracking; 0% Shrinkage
- Next generation of inventory management
- Greater visibility of facility
- Increased Security
- Reduction in maintenance and record keeping of items
- Automated record keeping increases accuracy and reduces paperwork and hence saves time.

Want to know more—call us to present to you the RFID products and solution. You will be AMAZED

RFID Asset Tracking Systems

NoxCORE™ software of SimplyRFID tracks assets (people, documents, and items) and notifies you when critical assets start moving. Nox captures hi-def video of the event so you can make a decision on the required response.

Its simple, scalable and customizable.

How it works:

- RFID Readers and cameras are mounted in your facility.
- The RFID readers and cameras connect via network with SimplyRFID Nox software running on a Windows Server. The size and speed of the server depends on how many cameras/RFID readers you will connect.
- When tagged objects move, the Nox network tracks it all. You don't need to read the reports. You just "query" what you want to know and Nox tells you.
- If something happens that you said you didn't want to happen (like a computer or file folder walks out the door), Nox sends you a message on your cell phone. With a picture of the culprit in high-definition.

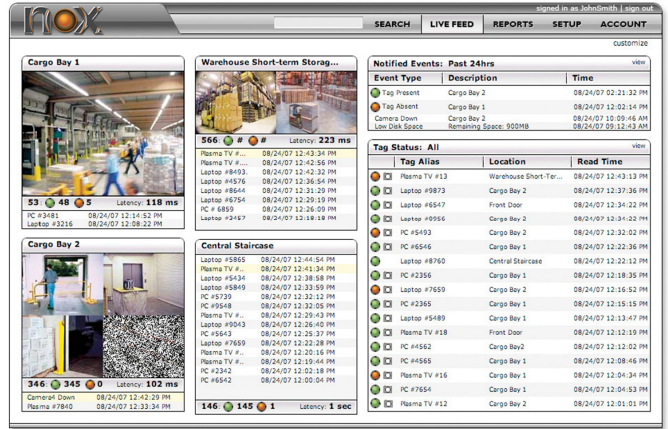

Handheld™ RFID Asset Tracking

For about the price of a label-based barcode system, NoxVault makes finding over 100 assets per second easy (You do not need to scan individual item)

- Tag items with RFID - Place an RFID tag on each asset. Each RFID tag has a unique value and that value is stored in Excel in a column/cell so you know which RFID tag is assigned to each asset.
- Squeeze trigger to locate items - NoxVault will locate all items within about 15 feet. If you have a pre-defined inventory, like "Carl's Office", Nox will tell you how many items it found, how many are missing, and show you a list of the missing items by name. For instance, "Red Stapler" instead of "Asset 12332"
- Success! Your items are now updated. Customize as per your need.

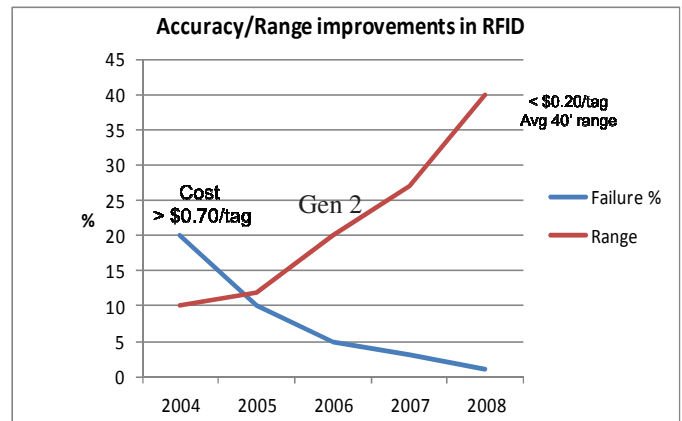

NoxCORE: RFID Integrated with Video

Connect people with Assets

Gen2 RFID System boasts:

- <1% failure in Inventory and Asset tracking;
- track 100 items/per sec
- Average passive RFID tag scan range—40'
- Cost of each tag - \$.20
